Dated: 20-03-2020
CVE ID: Multiple
Severity: High

Advisory for Google Chrome Security Updates

A. Description:

Google has released Chrome 80.0.3987.149 for Windows, Mac, and Linux. This version addresses a vulnerability that an attacker can exploit to take control of an affected system.

B. Security Issues Fixed:

Google has fixed 13 security issues in this release which includes vulnerability like Use-after-free, out-of-bounds and insufficient policy enforcement. Successful exploitation of these vulnerabilities could allow an attacker to take control of an affected system.

C. Affected Products and Solution:

This vulnerability affects Google Chrome versions prior to 80.0.3987.149. The new update can be downloaded from Google
